A. Mission Description and Budget Item Justification

This Program Element (PE) contains four projects: Maritime Concept Generation and Development (CGCD), Fleet Experimentation , Allied/Coalition Interoperability and Information Dominance (ACIID), and Space and Electronic Warfare (SEW) Engineering.

The CGCD project (2356) focuses on the generation, development and validation of warfighting concepts, Concept of Operations (CONOPS) and doctrine in order to eliminate war fighting gaps. Beginning in FY 2014, the CGCD project also includes funding for the CNO's Rapid Innovation Cell (CRIC), a small group of disruptive thinkers managed by the Navy Warfare Development Command (NWDC) to identify and quickly test in an operational environment, innovative ideas and technologies that are outside the traditional development and acquisition processes. NWDC also manages the Fleet Experimentation program (formerly Sea Trial) under the guidance of Commander USFF and COMPACFLT.

The FLEX project (3319) (formerly Sea Trial) develops new or improved warfighter capabilities through the experimentation of high payoff initiatives, technologies and concepts, Fleet Concepts of Operations (CONOPS), doctrine, and new tactics, techniques and procedures (TTP). The objective of FLEX is to produce recommended changes in doctrine, organization, training, materiel, leadership development, personnel, facilities, and policy (DOTMLPF-P) actions, with an emphasis on non-materiel solutions. Focusing on war fighting capability improvement through experimentation aimed at delivering potential solutions in support of current Operations Plans (OPLANs), FLEX spans both operational and tactical levels of warfare and reaches across the full range of military operations to enhance war fighting capabilities or fill current or future capability gaps.

The ACIID and SEW Engineering projects (0798 and 2144 respectively) are systems engineering non-acquisition programs to develop, test, implement technical authority, and validate naval Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR) architectures to support naval missions in the Joint and Coalition Theater. The mission of these projects are carried out by multiple tasks that are used to ensure naval C4ISR Command and Control

Appropriation/Budget Activity 1319: <i>Research, Development, Test & Evaluation, Navy / BA 4: Advanced Component Development & Prototypes (ACD&P)</i>	R-1 Program Element (Number/Name) PE 0604707N / <i>SEW Architecture/Eng Support</i>
---	---

Warfare (C2W) components of SEW are effectively integrated into service-oriented architecture delivering net-centric warfare capability. Additionally, these projects ensure that (1) the composite operational capabilities of SEW systems (not the individual component systems) conform to the naval C4ISR architecture and enhance war fighting capability as related to the objectives of National Defense Strategy, evolving joint visions and direction, such as net centric capability, and are guided by warfighter requirements; (2) that SEW systems and systems integration efforts involve leading-edge technology transfer of information processing technologies primarily through integration of government and commercial off-the-shelf (GOTS/COTS) products to enhance the Navy's operational capability, interoperability, warfighter effectiveness, flexible reconfiguration, as well as reduce costs; and (3) that SEW systems integration efforts promote the delivery of Information Dominance and the Navy's contribution to the Global Information Grid (GIG).

A. Mission Description and Budget Item Justification

The Allied/Coalition Interoperability and Information Dominance (ACIID) program advances Information Warfare (IW) (to include Command, Control, Communications, Computers; Intelligence, Surveillance and Reconnaissance (C4ISR); Electronic Warfare (EW); and Cyber Warfare), interoperability with Australia, Canada, New Zealand, United Kingdom, United States (AUSCANNZUKUS), North Atlantic Treaty Organization (NATO) and other Allied and Coalition partners. The program determines maritime operational gaps with our allies, identifies Doctrine, Organization, Training, Material, Leadership, Personnel, and Facilities (DOTMLPF) solutions with the potential to fill those gaps, and assesses these solutions and associated concepts of operation in laboratory and at-sea environments. The ACIID program includes integration and testing in support of joint and Allied war fighting capabilities, including interoperability testing of IW equipment. Allied and joint interoperability is critical for future maritime operations, especially as the United States Navy expands Internet Protocol (IP) networking throughout the fleet via Consolidated Afloat Networks and Enterprise Services (CANES), Next Generation Networks (NGEN), Multi-National Information Sharing (MNIS) and with the Global Information Grid (GiG). Currently, IP connectivity with AUSCANNZUKUS and other Allied/Coalition forces are limited, requiring extensive backhaul through ashore infrastructure. Higher bandwidth solutions suitable for use over tactical networks require development and assessment for emerging coalition and joint interoperability requirements, such as Network Operations Without Shore (NOWS), Maritime Domain Awareness (MDA), and the defeat of Anti-Access Area Denial (A2/AD). Increases in data throughput are required for the effective exchange of rich Information Dominance (ID) data sets and services via Service Oriented Architectures (SOA) within the limitations of High Frequency (HF), Ultra-High Frequency (UHF) and other portions of the radio frequency spectrum, coupled with appropriate Information Assurance and Computer Network Defense (IA/CND) mechanisms. Development and assessment of potential solutions will integrate improved IP capabilities with the Advanced Digital Network Systems (ADNS) and existing international standards (e.g. Allied Communications Publication 200, NATO Standardization Agreements 5066 and 4691). The continued development and refinement of advanced tactical networking technologies and protocols, as well as automatic link establishment (ALE) standards, will provide for a significant improvement in data sharing within, and between, coalition maritime elements.

C. Other Program Funding Summary (\$ in Millions)

N/A

Remarks

D. Acquisition Strategy

Allied/Coalition Interoperability and Information Dominance (ACIID) is a non-acquisition program that promotes United States Navy (USN) interoperability with allied and coalition forces to achieve the Chief of Naval Operations (CNO) vision by facilitating maritime interoperability in both processes and communications systems, including emerging capabilities, to counter growing high-end asymmetric threats, and is a key enabler of the force multiplying benefits achieved through cooperation among the Australia, Canada, New Zealand, United Kingdom, United States (AUSCANNZUKUS), North Atlantic Treaty Organization (NATO) and other partner nations. Activities include acquiring intellectual capital in emerging technical areas through contracts providing technical engineering expertise and surge capacity for emerging tasks.

E. Performance Metrics

Advanced Relay Capabilities: The ACIID program will employ laboratory testing and at-sea demonstrations to assess specific technologies, operational concepts, and integrated Doctrine, Organization, Training, Material, Leadership, Personnel and Facilities (DOTMLPF) solutions pertaining to Anti-Access Area Denial (A2/AD), Network Operations Without Shore (NOWS), Maritime Domain Awareness (MDA) and other aspects of Information Dominance (ID). These assessments will report on identified capability gaps, link capability gaps to technology/DOTMLPF gaps, identify technologies and DOTMLPF solutions considered ready for deployment, transition to a program of record to enhance Fleet war fighting capability and enhance Allied interoperability.

Note

Beginning in FY 2016 funding for the CNO's Rapid Innovation Cell (CRIC) is being moved from Project 2356 (Maritime Concept Generation and Concept Development) to Project 2140.

A. Mission Description and Budget Item Justification

The CNO's Rapid Innovation Cell (CRIC), created at the CNO's direction in 2013, is a group of junior officers and mid-grade enlisted personnel charged with identifying and developing disruptive and innovative solutions to warfighting problems, and to spread a culture of deckplate innovation throughout the Fleet. The intent is to look for innovative ideas, technologies or opportunities outside the normal development and acquisition areas. The CRIC is not a full-time job for these young innovators but a collateral duty in addition to their normally assigned duties. There are no orders detailing them to the CRIC - just an informal agreement between themselves, their Commanding Officers and the Commander Navy Warfare Development Command (NWDC) that allows them to spend a portion of their time working on their innovative project. NWDC manages the CRIC for the CNO and reports directly to the CNO on CRIC issues.

Interested junior officers/mid-grade enlisted personnel who are passionate about a particular idea/technology/opportunity apply to the program in Q2 for membership the following FY. Their application package identifies their proposed project and how they think it should be approached. The application packages are reviewed and 8-10 are selected for further consideration based on the background/experience of the individual and the potential of the proposed project. The basic criteria for project selection is something that can be brought to a prototype stage within 12-18 months with a small amount of seed money. The average project will have a total cost in the \$800K to \$1.2M range (spread over two FYs), with an upper limit of \$2M. Potential projects are reviewed for technical feasibility by Office of Naval Research (ONR) scientists and engineers during Q3, briefed by the CRIC member to a Flag Officer panel (CNWDC, CNR, and OPNAV N81) for interim approval and prioritization, and then approved by the CNO in Q4. The funding plan for the following FY starts to take shape during the Q3 feasibility review and Flag Officer interim approval. Approved projects are developed and executed in partnership with other Navy organizations, labs, academic institutions, and industry, typically within that 12-18 month timeframe. CRIC projects are not focused on addressing today's capability gaps (although some do) but rather to investigate potential solutions or opportunities outside the typical development/acquisition process. The CNO's guidance was that CRIC members not work from a list of "gaps to address" but rather use their imaginations to work on something of interest to them that could possibly provide value to the Navy. This process does not allow for building spend plans years in advance - it very much reacts to the interests of the junior officers/mid-grade enlisted personnel chosen for their innovative spirit and ability to "sell" flag officers on their ideas.

An example of one of the early projects is 3 dimensional(3D) printing, which has the potential to dramatically alter afloat maintenance and logistics by providing the ability to fabricate some types of spare parts on board vice waiting weeks for them to be shipped from a warehouse. Another is Suspended Underwater Raw Fiber (SURF), a very thin fiber-optic cable suspended beneath the surface of the water that can be deployed from a ship and used for high speed transport of data over tens or hundreds of miles.

Some future projects under consideration address issues such as energy conservation, maintenance cost reduction, and unmanned systems.

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
Title: New Accomplishment/Planned Program Entry	-	-	4.335	-	4.335
Articles:	-	-	-	-	-
<p>Description: Funding for the CNO's Rapid Innovation Cell (CRIC) was added to Project 2356 (Maritime Concept Generation and Concept Development) in FY 2014 and FY 2015. In FY 2016 through the FYDP CRIC funding is realigned to Project Code 2140. The CRIC, managed by NWDC and supported by the ONR, is intended to identify new, innovative ideas and technologies outside the mainstream Navy development and acquisition process, and get them to the Fleet for rapid testing and evaluation.</p> <p>FY 2014 Accomplishments: During FY 2014 and FY 2015 the CNO's Rapid Innovation Cell (CRIC) was funded under Project 2356 - for FY 2016 and beyond Project 2140 has been created for CRIC funding. For traceability purposes this data appears under both projects. FY 2014 CRIC accomplishments included: * Completed the Additive Manufacturing (3D Printing) project started in FY 2013 and transitioned it to OPNAV N4. This project placed a 3D printer at Dam Neck and another on board a forward deployed amphibious ship where data was gathered on the various ways sailors were able to use it to make themselves more productive and their jobs easier. 3D printing has the potential to dramatically alter afloat maintenance and logistics by providing the ability to fabricate some types of spare parts on board vice waiting weeks for them to be shipped from a warehouse. * Completed the Electronic Warfare Battle Management (EWBM) project that was kick-started in FY 2013 with a small amount of internally re-prioritized NWDC funding. This project attempted to integrate meteorological data into an EW battlefield visualization system being developed by ONR. It showed promise but more work is required beyond the capability of the CRIC, and the project has been picked up by the ONR team. * Reached a decision point on the development of the SURF project, a high-speed payout, expendable underwater fiber-optic cable suspended beneath the surface that can be deployed from a ship and used for high speed transport of data over tens or hundreds of miles. The decision was made to suspend funding on the project pending the resolution of the "connector" issue. * Completed initial development of the Ocean Augmented Reality project, a next generation "heads-up" display using commercial off-the-shelf technology. The initial tests showed great potential for use in maintenance applications - future work in FY 2015 and possibly 2016 will explore more uses both ashore and afloat.</p>

Exhibit R-2A, RDT&E Project Justification: PB 2016 Navy		Date: February 2015
Appropriation/Budget Activity 1319 / 4	R-1 Program Element (Number/Name) PE 0604707N / SEW Architecture/Eng Support	Project (Number/Name) 2140 / CNO Rapid Innovation Cell (CRIC)

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
<p>* Continued development of the Hyper Agile Model Driven Development (HAMMD) project, a way to more rapidly/cheaply develop software solutions. The USAF was originally providing a significant amount of funding but it was lost during USAF budget drills. The result was a suspension of work pending the availability of additional funding from another source.</p> <p>* Continued development of the Battle School project (kick-started in late FY 2013 with internally re-prioritized NWDC funding), a simulation driven tactical crowd-sourced wargame with potential uses in training and education environments. Initial response was good, resulting in some modifications that will continue into FY 2015.</p> <p>* Began development of the B++ project and transitioned it to NAVCYBERCOM (classified). The initial demonstration of the project was successful and generated the CNO's comment that "if the CRIC produces nothing more than B++ it has been a success." Some residual follow-up work to complete the CRIC portion of the project remains to be done with FY 2015 CRIC funding.</p> <p>* Began development of the Silent Nemo project, a small, autonomous, biomimetic UUV with potential for use in ISR missions. Development will continue with some FY 2015 funding with the potential of some carry-over into FY 2016.</p> <p>* Began initial planning of the Waste to Watts project, a solid state anerobic digester to convert waste to energy and help reduce energy requirements. The prototype is being installed at the U.S. Naval Academy.</p> <p>FY 2015 Plans: During FY 2014 and FY 2015 the CNO's Rapid Innovation Cell (CRIC) was funded under Project 2356 - for FY 2016 and beyond Project 2140 has been created for CRIC funding. For traceability purposes this data appears under both projects.</p> <p>* Continue work on Silent Nemo, a small, autonomous, biomimetic UUV with a multitude of possible ISR related issues.</p> <p>* Continue to work on Waste to Watts, a solid state anerobic digester to convert waste to energy. The prototype is being installed and tested at the U.S. Naval Academy and is turning the waste products from the galley into electricity returned to the USNA power grid. If successful there are applications for this product at numerous shore installations around the world.</p> <p>* Continue advanced development of the Ocean Augmented Reality project, a next generation "heads-up" displays using commercial off-the-shelf technology. Work in FY 2015 will focus on the development of additional "apps" in response to various fleet identified uses.</p> <p>* Continue development of the Hyper Agile Model Driven Development project, a way to more rapidly/cheaply develop specialized software applications (dependent on available funding).</p>

Remarks

D. Acquisition Strategy

This funding is used to develop technology-related projects to the prototype stage for Fleet evaluation and feedback, or to develop disruptive ideas to the point of evaluation (generally wargaming) in an operational environment.

E. Performance Metrics

- Harvest innovative ideas or technologies with potential to significantly increase warfighting capabilities.
- Develop selected ideas or technologies to the prototype or test-ready phase.
- Provide Fleet feedback on selected ideas or technologies.
- Transition those selected technologies to program offices or other organizations for continued development.

As of FY 2014, the Coalition Warrior Interoperability Demonstration (CWID) effort is referred to as Coalition Warrior Interoperability eXploration, eXperimentation, eXamination, eXercise (CWIX).

A. Mission Description and Budget Item Justification

OPNAVINST 3050.25 outlines the policy to use Warfighting Capability, Capacity, and Wholeness assessments to support the Navy's Planning Programming Budgeting and Execution (PPBE) process. Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR) integrated architectures serve as key components in assessing capability and capacity gaps, enabling analysis of individual platforms and System of Systems (SoS) capabilities in order to achieve the desired warfighting effect.

Office of the Secretary of Defense (OSD) has defined several key programs, initiatives and policies that drive Navy requirements prioritization and impact Navy programs of record. Major such efforts include Joint Information Environment (JIE), Intelligence Community Information Technology Environment (IC ITE), and the Department of Defense (DoD) Risk Management Framework (RMF). Space and Naval Warfare Systems Command (SPAWAR) responsibilities for Information Technology (IT) Technical Authority (TA), Information Assurance (IA) TA, and the Information Dominance Enterprise Architecture (IDEA) will guide Navy's alignment with and implementation of these key, external requirements.

Additionally, Office of the Chief of Naval Operations (OPNAV) N2/N6 Information Dominance (ID) objectives for Assured Command and Control (C2), Battlespace Awareness, and Integrated Fires capabilities require significant changes and improvements to the Navy's approach for managing its information infrastructure, content, and effects. Potential adversaries will exploit perceived U.S. space and cyberspace vulnerabilities which could impact United States information-handling capabilities and wartime readiness. To realize the ID vision, SPAWAR as the Navy's ID Systems Command, will need to support and enforce implementation of IT and IA TA architectures, specifications, standards and profiles to ensure Navy cyber capabilities are a warfighting asset, not a liability.

The Space and Electronic Warfare provides three main functions:

- 1) Perform SoS and platform technical evaluations to establish the alignment with the OPNAV N2/N6 ID vision for the Navy and identify performance and operational risks associated with the integration of multiple systems to provide a robust, mission based capability; 2) Develop C4ISR/IT/ID integrated architecture products; and 3) Support development of and compliance with C4ISR/IT/ID systems engineering processes and standards. The integrated architecture products are used to support the Navy's budget process by providing a current baseline and a target end state to inform decision-making and prioritization for how the acquisition system will deliver new capabilities to the war fighter. The systems engineering processes and standards provide the construct for Assured C2, Battlespace Awareness and Integrated Fires interoperability requirements analyses to identify capability shortfalls/gaps and to compare/test alternatives in a joint end-to-end environment while identifying associated

<p>Navy-wide C4ISR/IT/ID implications. Processes include developing and applying criteria for use in Systems Engineering Technical Reviews (SETRs) and Gate Reviews, and providing technical inputs and assessments to governance bodies. This includes Human Systems Integration (HSI) to provide a mission-centered orientation to ensure effective operational employment of fielded capability. As joint concepts and OSD efforts/programs are defined and matured, the Navy's Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR) integrated architectures are refined in-turn, and the supporting C4ISR systems engineering processes and standards work to engineer and enact C4ISR implementations Navy-wide across all C4ISR mission areas.</p> <p>Products provided:</p> <ol style="list-style-type: none"> 1) C4ISR, Information Technology (IT), Information Assurance (IA) and Information Dominance (ID) integrated architectures to reflect current, as-programmed and future, target states <ul style="list-style-type: none"> -Fit for Purpose/Department of Defense Architecture Framework (DoDAF) compliant architecture views -Systems Command (SYSCOM) Technical Authority (TA) specifications, standards and profiles -Common processes and tools 2) Supporting C4ISR/IT/ID systems engineering processes <ul style="list-style-type: none"> - Technical standards, architectures, design guidance tools, and policies support to SYSCOMs developing IT systems and connecting to the Navy Enterprise Network afloat, ashore & aloft -Technical analysis to Command 10th Fleet (C10F) and Office of the Chief of Naval Operations (OPNAV) utilizing an IA Risk Management Framework (RMF) -Documentation of IT interfaces to Navy Networks -Certifications of systems and applications connected to the Navy Enterprise Network -Distributed Command and Control (C2) Interoperability Requirement Analysis - Gaps Analysis, Overlap Analysis, System Priority Lists, C4ISR Metrics and Models, Analysis of Alternatives, Requirements Database, Assessment Repository, Resource Implications Studies, Baseline Performance Models, Mission Task Analysis, Human Systems Integration (HSI) assessments -End-to-End Systems Engineering and Integrated Design - Operational feasibility studies, technical feasibility studies, technical roadmap engineering validations, architectures and assessment traceability matrices -Joint and Coalition interoperability trials - Joint end-to-end prototyping trials; joint/coalition interoperability demonstrations; interoperability assessments and metrics; and interoperability studies via the Coalition Warrior Interoperability eXploration, eXperimentation, eXamination, eXercise (CWIX) formerly Coalition Warrior Interoperability Demonstration (CWID). United States Navy (USN) provides funding to the general CWID operating budget and participates by operating a USN demonstration site -Technical analyses for Navy cloud computing options, including cloud deployment models (utility/data), mission context, warfighting and cost implications and possible implementation options for ashore and afloat capabilities -Integration and Interoperability (I&I) - Support Assistant Secretary of the Navy for Research, Development, and Acquisition (ASN(RDA)) and OPNAV I&I initiatives to ensure integration and interoperability across Assured C2, Battlespace Awareness and Integrated Fires to deliver ID to Navy warfighters. Conduct analyses and engineering activities that provide an operational, mission-driven context to the assessment of capability gaps and interoperability seams between Navy System of Systems (SoS) capabilities that better enable acquisition programs to deliver fully integrated and interoperable warfighting capabilities. Provide I&I support in Systems Engineering Technical Reviews (SETRs) and provide recommendations for updates to acquisition policies and guidance -Information Technology Procurement Request (ITPR) - Review of Navy ITPRs for developing systems to ensure adherence to Navy IT Standards 3) Compliance and alignment reports with Navy Enterprise Architecture/Data Strategy and ASN(RDA) system engineering policies generated during SETRs

C. Other Program Funding Summary (\$ in Millions)

N/A

Remarks

D. Acquisition Strategy

Space and Electronic Warfare (SEW) Engineering is a non-acquisition program that develops, tests, implements technical authority, and validates naval Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR); provides integrated architecture products and supports C4ISR systems engineering processes and standards. Activities include acquiring intellectual capital in emerging technical areas through contracts providing technical engineering expertise and surge capacity for emerging tasks.

E. Performance Metrics

The Space and Electronic Warfare (SEW) engineering program will employ rigorous and consistent system engineering practices in an evolving value model to support development and deployment of shipboard, undersea, and land based capabilities based on mission and performance requirements, integrated enterprise architectures, model-validated solutions, and sustainment and supportability needs for the Command and Control, Intelligence, Networks, Communications, Space, and Business Information Technology domains.

Coalition Warrior Interoperability eXploration, eXperimentation, eXamination, eXercise (CWIX) Performance Metrics: Three key metrics: (1) Interoperability and compliance with Naval, joint, coalition and other non-governmental organization architectures, systems and equipment; (2) Compliance with Defense Information

Note

In FY 2014 and FY 2015 the Maritime Concept Generation and Development project also included funding for the CNO's Rapid Innovation Cell (CRIC). Beginning in FY 2016 funding for the CNO's Rapid Innovation Cell (CRIC) is in Project 2140.

A. Mission Description and Budget Item Justification

In "A Cooperative Strategy for 21st Century Seapower" then CNO, ADM Gary Roughead, reiterated the importance of fleet experimentation "Specific initiatives in support of this strategy must be vetted and tested over time through experimentation, wargaming, and continued operational experience..."

The "Naval Operations Concept of 2010 (NOC 10)" included direct references to experimentation: "The ideas in NOC 10 will be refined over time through wargaming, experimentation, operational analysis and practical experience - ultimately resulting in changes to the way naval forces are employed."

In a June 2013 Proceedings article entitled "A New Naval Era", the current CNO and the Commandant of the Marine Corps discussed the importance of a Navy-Marine Corps team dedicated to redefining the contours of tomorrow's naval force today through innovation and experimentation.

The Maritime Concept Generation and Concept Development project funds four main efforts:

(1) Experimentation in support of the Concept Generation/Concept Development (CG/CD) program. The priorities for the CG/CD program are to explore near/far-term technological and non-technological solutions to war fighting gaps across all naval warfare areas. The associated experimentation efforts include planning, systems engineering and integration, modeling and simulation support, event execution, data collection, analysis, and assessment for a wide-range of experiment venues, such as workshops, seminars, war games, limited objective experiments, limited technical experiments, and live force events.

(2) Provides planning, execution and analysis support to the Fleet Experimentation (FLEX) program, a joint U.S. Fleet Forces/Pacific Fleet effort managed by NWDC, and the only program. NWDC provides planning, systems engineering and integration, execution, data collection, and analysis support for FLEX events to address identified warfighting gaps prioritized in the CUSFF/CPF Commander's Guidance for Fleet Experimentation. The FLEX program and efforts of the FLEX team support the "last tactical mile" of many other Navy Science and Technology (S&T) programs by supporting those programs when the technology is mature enough and requires evaluation on or by a "fleet asset" - ships, airplanes, submarines, sailors. Reductions in FLEX program support cause many other innovative/S&T programs to also suffer the consequences through the loss of the expertise resident in the FLEX program/team.

(3) Provides Modeling and Simulation (M&S) support to FLEX and NWDC experimentation efforts. Where practical M&S is used to stimulate decision making during wargaming and experimentation vice the more expensive and difficult use of live forces.

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2016 Navy **Date:** February 2015

Appropriation/Budget Activity 1319 / 4	R-1 Program Element (Number/Name) PE 0604707N / SEW Architecture/Eng Support	Project (Number/Name) 2356 / Maritime Concept Generation & Development
--	--	--

(4) Provides for the Navy's Tactical Development and Evaluation (TAC D&E) program, managed by NWDC. This program, focused on providing near-term solutions to address specific fleet-identified tactical issues. Proposed projects are submitted by fleet units, prioritized against Commander's Guidance issued by Commander US Fleet Forces and Commander Pacific Fleet, and then funded to the extent of the available funding.

Products produced include:

- Concepts signed by the CNO that influence future funding and technological development
- White papers (think pieces) intended to generate further discussion within Navy leadership
- Experimentation final reports (including analysis and recommendations)
- FLEX event Analysis Reports
- FLEX event DOTMLPF change recommendations
- New/revised doctrinal and Tactics/Techniques/Procedures publications
- Tactical Memorandum (TACMEMOs)(draft doctrine)
- Concepts of Operation (CONOPS)
- Tactical Decision Aids (TACAIDS)

Specific products are listed in the Accomplishments/Plans section of this exhibit.

Tis project shows an increase from FY 2015 to FY 2016 even though the CRIC is funded from its own project in FY 2016. The FY 2015 funding, however, did not adequately cover the CRIC projects approved for execution by the CNO (approximately \$3M shortfall) nor did it adequately cover experimentation support costs (reduction of contractor support resulted in down-scoping of some experimentation efforts). The lack of adequate FY 2015 funding has put NWDC in a position where FY 2016 funding will be required during October 2015 to avoid a work stoppage.

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
Title: Maritime Concept Generation and Development	9.789	5.346	8.390	-	8.390
Articles:	-	-	-	-	-
Description: In FY 2014 and FY 2015 this project funded:					
<ul style="list-style-type: none"> - portions of the CNO's Concept Generation/Concept Development program. - NWDC management, planning and execution support to the Fleet Experimentation (FLEX) program. - Modeling and Simulation support to the FLEX program. - CNO's Rapid Innovation Cell (CRIC). - Navy's Tactical Development and Evaluation (TAC D&E) program. 					
In FY 2016 funding for the CNO's Rapid Innovation Cell (CRIC) moves to a new project, 2140.

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
<p><i>FY 2014 Accomplishments:</i> Concept Generation/Concept Development * Completed the Undersea Domain Operating Concept, an idea of how to maintain and maximize our advantages in the undersea environment, which was signed by the CNO along with a POA&M assigning actions to appropriate stakeholders. One of those actions included developing an Undersea Domain Operating Concept experimentation campaign to assist in turning the conceptual ideas into reality. * Completed development of the Information Dominance Enabling Concept: Assured C2 (IDEC) which was signed by the CNO in Dec 2014. This concept focused on how we prevail in an A2/AD environment. * Completed the Counter-Intelligence, Surveillance, Reconnaissance (C-ISR) concept which is awaiting VCNO endorsement. This concept is focused on creating a temporary window of access in a robust A2/AD environment. * Completed work on the Joint Concept for Rapid Aggregation (JCRA), a Joint Staff concept that will improve speed of response to global crises given the future operating environment. The draft is currently being reviewed by the Service N3/5s. * Started development of the Agile Forward Presence concept which is focused on a different way of deploying forces and providing presence. The first draft is being circulated to numerous stakeholders for feedback. * Started development of the Distributed Naval Air Operations concept which is focused on a way of spreading air strike capabilities across multiple platforms. The first draft is being circulated to numerous stakeholders for feedback. * Completed a White Paper for a prospective concept on Operational Logistics (OPLOG). The concept will focus on ways to mitigate challenges to sustainment in the future operating environment. This White Paper is at CUSFF/CPF for approval. * Completed a White Paper for a prospective concept on Electro-Magnetic Maneuver Warfare (EMW). The concept will focus on methods to enable friendly forces to maneuver within a contested electromagnetic environment. this White Paper is at CUSFF/CPF for approval. * Began work on an update to the 2006 Operating Concept for the Rail Gun. NWDC is managing the project with NAVSEA 405 as the customer. First draft is due in Mar 2015. * Worked with the Combined Joint Operations from the Sea Center for Excellence (CJOS COE), a NATO command, on the Allied Maritime ISR concept to improve allied interoperability with ISR capabilities. Allied Command for Transformation (ACT) has placed this concept on hold.</p>

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
<p>NWDC provides design, planning, systems engineering and integration, modeling and simulation support, event execution, data collection, analysis, and assessment support for a wide-range of Fleet Experimentation (FLEX) program experiment venues, such as workshops, seminars, war games, limited objective experiments, limited technical experiments, and live force events. Following is information on some of the FLEX events supported in FY 2014:</p> <p>* Completed the Fleet Battle Experiment 13 (FBX 13) as part of the FLEX 2013 Execution Plan. The execution event, done in conjunction with a fleet training/certification event was delayed to Nov 2013 due to ship scheduling issues. FBX 13, the culminating event of a three year Counter-Intelligence, Surveillance and Reconnaissance (C-ISR) campaign evaluated the tactical use and integration of several classified technologies in an operational environment. As a result of FBX 13 four new tactical publications have been produced.</p> <p>* The Naval Integrated Fire Control - Counter Air (NIFC-CA) is a complex system of systems capability being deployed on Carrier Strike Groups beginning in 2016. A multi-year campaign plan was developed to aid in the integration,tactics development, and employment of this complex system. The FY-14 portion of the multi-year plan included all of the planning and preliminary events leading up to Wargame #2 that was held in Dec 2014. Those preliminary events included a series of six workshops that developed/examined NIFC-CA tactics and system capabilities/limitations. The Assessment Report (due in Jan 2015) will inform updates to the NIFC-CA CONOPS, other air warfare related doctrinal publications, and fleet training programs and exercises.</p> <p>* The Laser Weapon System (LAWS) Experimentation Campaign is a multi-year effort that began in 2012 with BLACK DART 2012 with the first successful engagement of an unmanned aerial vehicle with a laser weapon system from a US warship (USA DEWEY, DDG 105). As a result of this experiment the CNO directed the installation and deployment of a laser prototype on USS PONCE (AFSB-1) in FY 2014. An operational demonstration of that system against operationally representative targets in a realistic environment was accomplished in Nov 2014. That effort, part of the FLEX 2014 plan, is producing a Final Report (including analysis and recommendations) as well as a Solid State Laser Tactical Memorandum (TACMEMO), draft tactics for the safe and effective utilization of this new system.</p> <p>* The Aegis Ashore Wargame, conducted as part of the FLEX 2014 Execution Plan, was an examination by Navy stakeholders of the operational, training, and logistics requirements to effectively sustain and operate the Aegis Ashore system as a critical part of the European Phased Adaptive Approach - the President's plan to provide Ballistic Missile Defense of Europe. This effort produced a QuickLook Report, Final Experiment Report, and an Analysis Report - all of which identified "wholeness" gaps (operational, employment, training, logistics and sustainment) as well as an evaluation of the adequacy of the Aegis Ashore Platform Wholeness CONOPS.</p> <p>* The JHSV Campaign Plan was conducted in two parts - SPEARHEAD's (JHSV-1) maiden deployment to COMSIXTHFLT and operations in the COMFOURTHFLT area. The purpose of the campaign, which will</p>

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
<p>continue into FY-15, is to examine other missions for which the JHSV is suitable with little to no modification to the existing sea frame. The C6F efforts looked at the use of the JHSV in Theater Security Cooperation, Maritime Command and Control, and Afloat Forward Staging Base missions; while the primary focus of the C4F efforts looked at its use in Counter-Illicit Trafficking operations. A follow-on JHSV/MLP wargame examined interoperability issues associated with the MLP and the JHSV, LMSR, LCS, and other ship-to-shore connectors. The major products of the FY-14 efforts include a Final Experiment Report which will inform key OPNAV investment decisions; and revisions to the JHSV Platform Wholeness CONOPS, JHSV Warfighting CONOPS and AFP Fleet CONOPS.</p> <p>* Executed the Obscurants Campaign, a three phased experiment focused on assessing the potential of Naval Obscurants to reduce the vulnerability of U.S. platforms to detection and targeting, and identifying the potential detrimental effects on own-ship systems including radar, communications, machinery and human health. A great deal of existing data from previous Army and Navy obscurants efforts was utilized in building the campaign plan. The plan consisted of a Modeling & Simulation event (Phase I), a shore based event (Phase II), and an at-sea event in the COMSEVENTHFLT (C7F) area. Phases I and II provided risk-mitigation, increased the knowledge base, and aided in the design and planning for Phase III. Products included a Final Experiment Report and a draft Obscurants Employment Manual.</p> <p>* Executed Trident Warrior (TW) 14 in conjunction with RIMPAC, a large multi-national exercise. Trident Warrior is an annual at-sea warfighting event that in 2014 evaluated the potential military utility of 37 new and emerging capabilities (including eight initiatives sponsored by the AUSCANNZUKUS experimentation alliance) and involved 7 USN ships, 3 allied ships, and 11 US and allied shore installations. Integrating this experiment into RIMPAC 14 leveraged planned steaming days, flight hours, and the operational environment to conduct a cost-effective large-scale at-sea experimentation event. The three specific functions of TW were to: (1) identify and capture innovative solutions that addressed prioritized fleet warfighting gaps; (2) refine systems interfaces and interoperability using fleet operator input in an operational environment; and (3) develop and deliver documents that inform operations and key investment decisions. In addition to the Final Experiment Report (which will include DOTMLPF recommendations), products include changes to seven existing tactical publications, inputs to four tactical publications currently in draft, and the input to five original tactical publications. Of interest, one of the key initiatives evaluated was the CNO Speed to Fleet Transportable EW Module (TEWM) with the immediate benefit being the accelerated deployment of that system on ships deployed to the C6F area.</p> <p>* Continued work on the multi-year Fast Attack Craft/Fast Inshore Attack Craft (FAC/FIAC) campaign plan by identifying and testing near-term (within 12 months) capability improvements to the fleet. The Final Experiment Report will provide recommended changes to current FAC/FIAC doctrine as well as DOTMLPF recommendations to inform acquisition decisions.</p>

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
<p>* Executed Undersea Warfare Employment of Emerging Technologies (USWEET) 14, an experiment focused on evaluating emerging technologies with the potential to close anti-submarine and mine warfare capability gaps. The focus of USWEET 14 was on shallow water surveillance and several systems were examined. The Experiment Final Report includes DOTMLPF recommendations that will inform acquisition investment decisions.</p> <p>* Executed experimentation phase of Valiant Shield 2014 (VS14), a bi-annual exercise focused on at-sea training in the Pacific area of operations. The VS14 experimentation phase included 21 experiments and demonstrations examined C-ISR tactics, joint interoperability of selected forces, theater-wide strategic communications, ASW in a multi-threat environment, electronic attack, and distributed basing. In addition to the VS14 Final Experiment Report (DOTMLPF recommendations), the Unmanned Aircraft Systems Third Party Targeting TACMEMO and the Employment of surface Warfare Tactical Tomahawk TACBUL (Tactical Bulletin) were validated.</p> <p>* Executed the Joint Standoff Weapon - C (JSOW-C) employment Limited Objective Experiment (LOE). The focus was to evaluate live JSOW-C employment tactics using a simulated artillery bunker as a target. The result were two updates to the TOPGUN manual - one describing JSOW-C employment in a complex tactical environment and the other describing JSOW-C employment in an Electronic Attack environment.</p> <p>* Executed the F-35B and LHA/D Integration Wargame, the focus of which was to inform development of a Fleet Warfighting CONOPS on F-35B employment as part of a large Naval Force beyond the traditional ACE-MEU/ ARG configuration. This event brought together a large number of subject matter experts to evaluate three different F-35B/MV-22 embarkation options in a variety of different scenarios postulated in the HQMC LHA/D and F-35B Integration White Paper and determine the advantages/disadvantages of each. In addition to the Final Experiment Report which included the findings and recommendations, this effort informed the development of a F-35B and LHA/D Fleet Warfighting CONOPS, and recommended changes to the Amphibious Assault Ship and F-35B Aircraft Integration Platform Wholeness CONOPS.</p> <p>Preliminary planning work was started on the following events in the FLEX Execution Plan for 2015:</p> <p>* Continued work on the Trident Warrior experimentation campaign with advance planning for Trident Warrior 15, to be done in conjunction with C7F.</p> <p>* Continued planning for the FY15 events in the NIFC-CA Experimentation Campaign.</p> <p>* Started advance planning for the FY15 Rail Gun Wargame.</p> <p>* Started advance planning for the FY15 Counter FAC/FIAC At-Sea Experiment.</p> <p>* Started advance planning for the Netted Sensors At-Sea Experiment.</p> <p>* Continued planning for the COMFOURTHFLT JHSV At-Sea Experiment that was postponed from FY-14 to FY-15 due to equipment casualties.</p>

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
<p>* Started advance planning for the 5 Eyes UUV Operations Wargames. * Started advance planning for the LPD-17 Wargame. * Started advance planning for the Alternative Platforms with Payloads Wargame.</p> <p>During FY 2014 and FY 2015 the CNO's Rapid Innovation Cell (CRIC) was funded under Project 2356 - for FY 2016 and beyond Project 2140 has been created for CRIC funding. For traceability purposes this data appears under both projects. FY 2014 CRIC accomplishments included: * Completed the Additive Manufacturing (3D Printing) project started in FY 2013 and transitioned it to OPNAV N4. This project placed a 3D printer at Dam Neck and another on board a forward deployed amphibious ship where data was gathered on the various ways sailors were able to use it to make themselves more productive and their jobs easier. 3D printing has the potential to dramatically alter afloat maintenance and logistics by providing the ability to fabricate some types of spare parts on board vice waiting weeks for them to be shipped from a warehouse. * Completed the Electronic Warfare Battle Management (EWBM) project that was kick-started in FY 2013 with a small amount of internally re-prioritized NWDC funding. This project attempted to integrate meteorological data into an EW battlefield visualization system being developed by ONR. It showed promise but more work is required beyond the capability of the CRIC, and the project has been picked up by the ONR team. * Reached a decision point on the development of the SURF project, a high-speed payout, expendable underwater fiber-optic cable suspended beneath the surface that can be deployed from a ship and used for high speed transport of data over tens or hundreds of miles. The decision was made to suspend funding on the project pending the resolution of the "connector" issue. * Completed initial development of the Ocean Augmented Reality project, a next generation "heads-up" display using commercial off-the-shelf technology. The initial tests showed great potential for use in maintenance applications - future work in FY 2015 and possibly 2016 will explore more uses both ashore and afloat. * Continued development of the Hyper Agile Model Driven Development (HAMMD) project, a way to more rapidly/cheaply develop software solutions. The USAF was originally providing a significant amount of funding but it was lost during USAF budget drills. The result was a suspension of work pending the availability of additional funding from another source. * Continued development of the Battle School project (kick-started in late FY 2013 with internally re-prioritized NWDC funding), a simulation driven tactical crowd-sourced wargame with potential uses in training and education environments. Initial response was good, resulting in some modifications that will continue into FY 2015.</p>

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
<p>* Began development of the B++ project and transitioned it to NAVCYBERCOM (classified). The initial demonstration of the project was successful and generated the CNO's comment that "if the CRIC produces nothing more than B++ it has been a success." Some residual follow-up work to complete the CRIC portion of the project remains to be done with FY 2015 CRIC funding.</p> <p>* Began development of the Silent Nemo project, a small, autonomous, biomimetic UUV with potential for use in ISR missions. Development will continue with some FY 2015 funding with the possibility of some spill-over into FY 2016.</p> <p>* Began initial planning of the Waste to Watts project, a solid state anerobic digester to convert waste to energy and help reduce energy requirements. The prototype is being installed at the U.S. Naval Academy.</p> <p>FY 2015 Plans: Continue all FY 2014 Concept Generation/Concept Development efforts that were not completed in FY14 and begin development of new concepts resulting from the idea harvesting/Four Star approval of previous years.</p> <p>* Continue development of the Agile Forward Presence concept which is focused on a different way of deploying forces and providing presence. Produce an updated draft based on stakeholder feedback.</p> <p>* Continue development of the Distributed Naval Air Operations concept which is focused on a way of spreading air strike capabilities across multiple platforms. Produce an updated draft based on stakeholder feedback.</p> <p>* After White Paper approval by CUSFF/CPF, begin development of an Operational Logistics (OPLOG) concept focused on ways to mitigate challenges to sustainment in the future operating environment.</p> <p>* After White Paper approval by CUSFF/CPF, begin development of an Electro-Magnetic Maneuver Warfare (EMW) concept focused on methods to enable friendly forces to maneuver within a contested electromagnetic environment.</p> <p>* Continue work on an update to the 2006 Operating Concept for the Rail Gun. NWDC is managing the project with NAVSEA 405 as the customer. First draft is due in Mar 2015.</p> <p>* Continue to work with the Combined Joint Operations from the Sea Center for Excellence (CJOS COE), a NATO command, on the Allied Maritime ISR concept to improve allied interoperability with ISR capabilities.</p> <p>* Complete development of a White Paper on a Navy Concept for Sea Denial Operations and forward to CUSFF/CPF for approval. After White Paper approval begin development of the concept.</p> <p>* Complete development of a White Paper on a Cross Domain Operations concept and forward to CUSFF/CPF for approval. After White Paper approval begin development of the concept.</p> <p>* Provide the completed White Paper on Sowing Chaos/Harvesting Advantages to stakeholders for feedback prior to CUSFF/CPF approval.</p>

Appropriation/Budget Activity 1319 / 4	R-1 Program Element (Number/Name) PE 0604707N / SEW Architecture/Eng Support	Project (Number/Name) 2356 / Maritime Concept Generation & Development

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
<p>* Begin development of a White Paper on a Navy Capstone Concept for Operations for possible CUSFF/CPF approval.</p> <p>Complete remaining events from the FY 2014 FLEX Execution Plan, continue work on the multi-year campaign plans, and execute the FY 2015 FLEX Execution Plan:</p> <p>* Complete Bold Alligator 14 (Oct-Nov 14), an event focused on Navy-Marine Corps integration and Command and Control, and provide Final Report containing DOTMLPF recommendations to Navy and Marine Corps stakeholders.</p> <p>* Complete any hold-over tasking originating from the Dec 2014 NIFC-CA wargame.</p> <p>* Continue to work on items from the Undersea Domain Operating Concept experimentation campaign which is focused on ways to maintain and maximize our advantages in the undersea environment.</p> <p>* Continue to work on items from the Naval Integrated Fire Control - Counter Air (NIFC-CA) experimentation campaign which is focused on the integration of advanced air defense capabilities.</p> <p>* Continue to work on items from the Counter-Intelligence, Surveillance, Reconnaissance (C-ISR) experimentation campaign which is focused on tactics and technologies to counter the adversary's ISR systems.</p> <p>* Continue to work on items from the Command and Control in a Denied/Degraded Environment (C2D2E) experimentation campaign which is focused on tactics to ensure connectivity when communication systems are attacked.</p> <p>* Continue planning and execution of Trident Warrior 15, an annual event that looks at the integration and use of emerging technologies. TW15 will be executed in the C7F area and will focus on the needs of the forward deployed forces.</p> <p>* Plan and execute the Alternate Platforms with Payloads Wargame focused on how USNS platforms can be used for selected missions generally accomplished with gray-hull platforms. Products will inform future investment decisions and CONOPS for the use of these USNS platforms.</p> <p>* Continue the planning and execute the JHSV LOE 2 in the C4F area, an event that was postponed from FY-14 to FY-15 due to equipment casualties. The FY-15 efforts will look at the capability of the JHSV to support several Adaptive Force Packages, specifically Mine Warfare, Counter-Trafficking Afloat Forward Staging Base, and organic Unmanned Aerial Systems support. The products of this event will inform investment decisions and CONOPS for the use of these Adaptive Force Packages and the JHSV.</p> <p>* Plan and execute the Netted Sensors At-Sea Experiment, an event that will look at eight different initiatives that will fuse data from multiple sensors into a single picture, greatly improving situational awareness.</p>

Appropriation/Budget Activity 1319 / 4	R-1 Program Element (Number/Name) PE 0604707N / SEW Architecture/Eng Support	Project (Number/Name) 2356 / Maritime Concept Generation & Development

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
<p>* Plan and execute the Electromagnetic Maneuver Warfare (EMW) experimentation initiatives scheduled for several different events during FY-15 including two different wargames and an at-sea event. This will be the first year of an extended multi-year EMW experimentation looking at ways to increase our ability to utilize the electromagnetic spectrum while limited our adversaries' ability to do the same. The products of the FY-15 events will inform future investment decisions as well as provide updates to six different tactics and doctrinal publications.</p> <p>* Plan and execute the Counter FAC/FIAC At-Sea element of the 2015 FLEX Execution Plan. This FY-15 event will focus on the use of small armed UAVs against hostile boats, and will inform investment decisions and updated tactics.</p> <p>* Plan and execute the 5 Eyes Unmanned Undersea Vehicles (UUV) Operations Wargame. This will be a two phased wargame focused on the employment of integrated UUVs operating in a coalition environment. The product of this experiment will be a 5 Eyes releasable Tactical Memorandum (TACMEMO).</p> <p>* Plan and execute the LPD-17 Wargame, an event that will focus on the feasibility of using the LPD-17 class to perform additional missions as a Regional/Sector Air Defense Coordinator, and as an alternate Command and Control platform. The results of this wargame will inform changes to various LPD-17 documents including the Class Tactical Manual and the LPD-17 manning plan.</p> <p>* Complete the planning and execute the Rail Gun Wargame, the purpose of which is to inform the update of the Rail Gun Operating Concept.</p> <p>During FY 2014 and FY 2015 the CNO's Rapid Innovation Cell (CRIC) was funded under Project 2356 - for FY 2016 and beyond Project 2140 has been created for CRIC funding. For traceability purposes this data appears under both projects.</p> <p>* Continue work on Silent Nemo, a small, autonomous, biomimetic UUV with a multitude of possible ISR related issues.</p> <p>* Continue to work on Waste to Watts, a solid state anerobic digester to convert waste to energy. The prototype is being installed and tested at the U.S. Naval Academy and is turning the waste products from the galley into electricity returned to the USNA power grid. If successful there are applications for this product at numerous shore installations around the world.</p> <p>* Continue advanced development of the Ocean Augmented Reality project, a next generation "heads-up" displays using commercial off-the-shelf technology. Work in FY 2015 will focus on the development of additional "apps" in response to various fleet identified uses.</p>

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
<p>* Continue development of the Hyper Agile Model Driven Development project, a way to more rapidly/cheaply develop specialized software applications (dependent on available funding).</p> <p>* Continue advanced development of the Battle School project, a simulation driven tactical crowd-sourced wargame.</p> <p>* Begin work on the Acoustic Jammer project, an idea to use off-the-shelf technology to overload adversary sonar systems (may be delayed until FY 2016 start due to separation from the Navy of the project lead and delay in identifying a replacement).</p> <p>* Begin work on the Littoral Operations Center project, an idea to combine existing off-the-systems to create small operations centers suitable for use on small platforms and ashore.</p> <p>* Begin work on the Statistically driven Maintenance Analysis and Reporting Technology (SMART) model which uses existing data to better predict maintenance needs. It builds on existing work done within the F/A-18 maintenance community.</p> <p>* Begin work on the Cosmo Gator project, an alternative navigation capability when GPS is not available (may be delayed until FY 2016 start due to rotation of the project lead to a deployed sea tour and delay in identifying a replacement).</p> <p>FY 2016 Base Plans: Continue CG/CD development efforts that carry-over from FY 2014 and FY 2015. * Begin development of new concepts resulting from the idea harvesting/Four Star approval from previous years.</p> <p>The Fleet Experimentation (FLEX) FY 2016 Execution Plan is based on two sets of inputs. The first is the FY 2016 events from the multi-year campaign plans developed to address major capability gaps. The second is based on recently identified fleet capability gaps that can be addressed within a single event. The experimentation for those recently identified capability gaps is proposed during the FY 2016 Execution Plan Development Conference scheduled for 1-2 Apr 2015. At that conference numbered fleets, warfare centers, Navy labs and other stakeholders present their plans and needs for FY 2016. Those needs are then prioritized based on the Commander USFF/Commander Pacific Fleet guidance message, combined with the FY 2016 events from the multi-year campaign plans, and developed into a proposed execution plan that will be refined during Q3 FY 2015 and approved by the two Fleet Commanders in early Q4 FY 2015. At that point the available FY 2016 funding is applied to the execution plan to form a FY 2016 spend plan and advance planning begins on the FY 2016 experimentation events. Following that we should have a much firmer picture of the actual events, contract costs, etc.</p>

C. Other Program Funding Summary (\$ in Millions)

N/A

Remarks

D. Acquisition Strategy

This funding is generally used to buy people to generate/develop/validate concepts, or to build and analyze the results of experiments focused on improved processes and tactics/techniques/procedures to mitigate identified war fighting gaps. The majority of this funding buys a core group of contractors who provide experiment design, execution and analysis support while the remainder is used to buy specific skill sets that are not part of the core group, and also cover some of the engineering and integration costs associated with certain experiments.

E. Performance Metrics

Maritime Concept Generation and Development/Related Experimentation:

- Refine concepts and identify key performance levels necessary for implementation.
- Demonstrate feasibility and discriminate among competing concepts and implementation alternatives.
- Understand potential military effectiveness and risk.
- Evaluate how much of the new capability and attendant force structure is needed.

UNCLASSIFIED

- Learn how to operate the new force and combine it with the legacy force.
- Develop recommended Doctrine, Organization, Training, Materiel, Leadership, and Personnel (DOTMLP) changes.
- Develop fleet war fighting requirements for submission to the OPNAV Navy Capabilities Development Process (NCDP) to inform Navy acquisition decisions.
- Integrate emergent concepts and technologies, leading to rapid introduction of needed war fighting capabilities in the fleet.
- Rapidly mature concepts, technologies, and doctrine.
- Focus on near, mid and long term war fighting challenges to realize increased war fighting effectiveness.

Remarks
 The vast majority of the contract costs are for people, primarily on two large Multi-Award contracts, one through DTIC (Defense Services MAC) and one through NAVSUP (Joint Staff J-7 MAC). Task orders on the DS MAC contract provide the majority of the Modeling & Simulation support for experimentation and some of the experiment planner support. Task orders on the JS J-7 MAC provide the majority of the experiment design, planner, and execution support provided by NWDC to the Fleet Experimentation program. With the planned availability of \$2-3M FY-16 funding for the Navy's Tactical Development and Evaluation (TAC D&E) program after three years of zero funding, it is anticipated that the TAC D&E projects selected for FY-16 funding will be executed under JS J-7 MAC task orders, thus explaining the dramatic increase. The remaining money is spread across several smaller contracts through NAVSEA, SPAWAR and ONR for CRIC projects and technical support for experimentation and modeling & simulation efforts. The fluctuation from year to year is the result of the expiration of existing contracts and the award from other contracting offices, and the movement of government support between various organizations based on the need of a specific experiment or project.

A. Mission Description and Budget Item Justification

The Fleet Experimentation (FLEX) program (formerly Sea Trial) develops new or improved warfighter capabilities through the experimentation of high payoff initiatives, technologies and concepts, Fleet Concepts of Operations (CONOPS), doctrine, and new tactics, techniques and procedures (TTP). The objective of the CUSFF/CPF directed FLEX program is to produce recommended changes in doctrine, organization, training, materiel, leadership development, personnel, facilities, and policy (DOTMLPF-P) actions, with an emphasis on non-materiel solutions. Implementation is aimed at delivering potential solutions in support of Operations Plans (OPLANS). FLEX is dedicated to providing solutions to near term (within the Fiscal Year Defense Plan) prioritized warfighting gaps as defined by the Commander, U.S. Fleet Forces (CUSFF)/Commander, Pacific Fleet (CPF) FLEX annual guidance.

FLEX exists today because CNOs (past and present) believe experimentation is vital to continuously improving naval warfighting capabilities. The FLEX program considers those warfighting gaps identified in: Integrated Prioritized Capability Lists (IPCL) generated by Warfighting Development Centers (WDC) through the warfare improvement program; the USFF/CPF Integrated Priorities Letter (IPL) delivered annually to the CNO; USFF/CPF Commanders' FLEX Guidance; and Navy and Joint Urgent Operational Needs Statements (UONS and JUONS). Of critical importance to understand is the fact that the FLEX program and associated efforts of the FLEX team support the "last tactical mile" of Navy and science and technology (S&T) programs. This "last tactical mile" support is delivered through "at sea" or "salt-water" testing and experimentation at a time when the technology is mature enough and requires evaluation on or by a fleet asset - ships, airplanes, submarines, networks, and/or sailors. In accordance with the joint CUSFF and CPF FLEX instruction, the FLEX program is the only authorized conduit to conduct experimentation using operational fleet assets.

FLEX runs the gamut from multi-year campaigns (experimentation of complex DOTMLPF capability), wargames (seminar and systems, workshops, limited objective/technical experiments and advanced war fighting experiments. The campaigns involve all facets of experimentation including design, planning, systems engineering and integration, execution, data collection, analysis, assessment, and the delivery of tangible products for the fleet. While Navy-centric, FLEX efforts include joint and coalition partners when appropriate.

Experimentation is vital to the Navy's future. It helps inform acquisition decisions and the development of emerging tactics, and it provides unique training opportunities for today's warfare commander, air, surface, subsurface and information dominance assets.

Further reducing or diminishing support of the FLEX program will cause innovative and S&T programs to suffer consequences through the loss of expertise resident in the FLEX program and team. FLEX faces additional challenges as efforts are becoming increasingly more complex and are being conducted at higher classification levels. These challenges prevent CUSFF/CPF from publicizing successes via mainstream channels thereby giving an incomplete impression of FLEX program contributions to the USFF/CPF organize, train, equip and capability requirements mission.

We had to reduce the planned funding for several contracts in FY15 due to the reduction of the FY15 budget from \$6.9M to \$5.1M. In addition, planned new contracts/solicitations for FY15 had to be put on hold or cancelled due to the budget cuts.

The contract cost increase for FY16 is based on an assumption that FLEX will receive \$8.8M, and can initiate new contract solicitations to replace expiring contracts, and replace contracts using First In First Out accounting system.

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2016 Navy		Date: February 2015
Appropriation/Budget Activity 1319 / 4	R-1 Program Element (Number/Name) PE 0604707N / SEW Architecture/Eng Support	Project (Number/Name) 3319 / Fleet Experimentation

FY16 has only 10 planned experiments because of the varying degrees of complexity for several of the planned events, specifically the EMW campaign. Highly complex threat and introduction of capability take years to experiment with in order to deliver TTP/TACMEMOs/Doctrine/Material capability for the Fleet to train to and use.

Title: Fleet Experimentation	11.876	5.158	8.864	-	8.864
Articles:	-	-	-	-	-
<p>Description: - FLEX is a USFF/CPF collaborative effort to address fleet prioritized capability gaps, led by USFF N8/N9, supported by Navy Warfare Development Command (NWDC), and coordinated with Naval Component Commands (NCC)/Numbered Fleets, Type Commanders (TYCOM), Systems Commands (SYSCOM), OPNAV, Services, Coalition, and Science & Technology (S&T) community. The Fleet Experimentation program objective is to produce recommended changes in doctrine, organization, training, materiel, leadership development, personnel, facilities, and policy (DOTMLPF-P) actions, with an emphasis on non-materiel solutions. Deliverables are focused on operational and tactical warfighting capability in the near term (within the Fiscal Year Defense Plan), and prioritized by the Commander, U.S. Fleet Forces (USFF)/Commander, Pacific Fleet (CPF) Fleet Experimentation annual guidance. NWDC plans and executes USFF/CPF approved multi-year Fleet experimentation campaigns and final reports. USFF/CPF staff manage the follow-on DOTMLPF-P actions with OPNAV, SYSCOMs, TYCOMs and Warfighter Development Command (WDC) staffs to establish or enhance warfighting capability in Integrated Air and Missile Defense (IAMD), Amphibious Warfare (AMW), Surface Warfare (SUW), Strike Warfare (STW), Anti-Submarine Warfare (ASW), Expeditionary Warfare (EXW), Information Dominance (ID), Mine Warfare (MIW) and Anti-Terrorism/Force Protection (AT/FP).</p> <ul style="list-style-type: none"> - Operational venue to experiment, demonstrate, assess warfighting CONOPS development, doctrine/training development, techniques and procedures (TTPs), and technologies - Multi-year experiment campaigns focused on warfighting capability per CPF/CUSFFC guidance to evaluate and transition to DOTMLPF-Policy change recommendations: - The intent of FLEX is to rapidly deploy/transition - New tactics, TTPs, and training - Emerging technologies - Fleet Concepts of Operations (CONOPS) - Innovative concepts and applications of existing systems - Trident Warrior is the component of FLEX that specifically targets C4I systems <p>FY 2014 Accomplishments:</p>

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
<p>- In FY14, NWDC, through the FLEX program, executed over 20 significant experiment events encompassing 103 individual experiment initiatives. Those events ranged from single initiative experiments, such as the live-fire evaluation of JSOW-C employment against a hardened target, to TRIDENT WARRIOR 2014, a large-scale at-sea experiment involving 37 Coalition initiatives conducted in conjunction with exercise RIMPAC 2014, to the NFIC-CA multi-year campaign to incrementally enhance the Fleet's Integrated Air and Missile Defense capability.</p> <p>- Every FLEX initiative is evaluated and selected for execution during a FLEX event based on several metrics. The two primary metrics are (1) whether or not the initiative can potentially provide a solution or make a significant contribution to resolving an identified warfighting capability gap, and (2) whether the initiative can be implemented or have an impact in the near term (next 1-3 years).</p> <p>- Of the more than 20 campaigns completed in FY14, the following 12 campaigns are described in detail to demonstrate specific campaign focus, function, deliverables, and accomplishments.</p> <p>- Campaign: Naval Integrated Fire Control - Counter Air (NIFC-CA)</p> <p>- Focus: NIFC-CA is a complex system- of-systems capability representing a significant investment by the Navy. FLEX program/team efforts in 2013 and 2014 support CUSFF's direction to conduct a phased, campaign-style approach to capabilities integration and implementation to improve understanding of NIFC-CA Increment I capability and its employment by Carrier Strike Groups (CSGs) in the 2016 time frame. Planned and executed throughout multiple events (workshops, systems and seminar wargames) the FY-14 work to develop appropriate TTP/SOP/CONOPS culminated in a fully-informed environment in a December CY 2014 Wargame 2 event. Wargame 2 consisted of the main Modeling and Simulation (M&S)-stimulated operator-in-the-loop (OITL) event, and supporting pre-wargame workshops and Limited Objective Events (LOE) - EMW/Counter-ISR/T, Combat ID (CID), Blue Force Laydown/Stationing, Tactics, Techniques and Procedures (TTP), and Commander's Conference for Command and Control (C2)/Composite Warfare Commander (CWC)/Rules of Engagement (ROE). NIFC-CA Wargame 2 support was provided in the following areas:</p> <ul style="list-style-type: none"> - 3.1 Wargame Planning and Design - 3.2 Wargame Execution - 3.3 Wargame Data Collection and Analysis - 3.4 Wargame Reporting Outcome and Results <p>- Functions: Support USFFC in planning, designing, executing, data collection and analysis, and reporting on Wargame 2 results as part of the NIFC-CA Wargame campaign plan. The intent was to ensure all wargame</p>

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
<p>initiatives were provided end-to-end consistent methodologies resulting in an independent, objective verification of results. Decision-makers are assured results are reliable and unbiased.</p> <ul style="list-style-type: none"> - Deliverables: Data Collection and Analysis Plan (DCAP) for the NIFC-CA Wargame, EMW/C-ISR/T, CID, Blue Force Laydown/Stationing, TTP, and Compiled Assessment Report - Accomplishments: Preparations for the wargame included support to six major workshops that developed/ examined draft NIFC-CA tactics, techniques, and procedures (TTP) and system capabilities and limitations. The results/deliverables of this wargame informs the NIFC-CA Fleet Warfighting CONOPS and other air warfare related NWP's and NTP's - and will inform changes to fleet training programs from the classroom to CSG-level COMPTUEXs and JTFEXs. The result is a more capable integrated air and missile defense CSG. - Campaign: Laser Weapon System (LaWS) - Focus: In August 2012, during BLACK DART 2012 (a FY12 FLEX event), the Navy Air and Missile Defense Command, with support from NWDC, led the execution of a fleet experiment which resulted in the first successful engagement of an unmanned aerial vehicle - with a laser weapon system - from U.S. Navy Destroyer USS DEWEY (DDG 105). As a result, CNO directed installation and deployment of a high-energy solid-state laser prototype on USS PONCE [AFSB(I)]. The system is projected to operate for approximately one year starting late-FY14 with a two-fold purpose: <ul style="list-style-type: none"> - Fill an immediate capability gap associated with platform and theater - Provide an opportunity to answer questions to support formal development and operational fielding of high energy laser weapons - Functions: <ul style="list-style-type: none"> - Conduct an operational demonstration in support of Solid State Laser Quick Reaction Capability (SSL-QRC) deployment onboard USS PONCE. - Successfully demonstrate SSL operations against operationally representative targets in a realistic environment. - Inform development of SSL TACMEMO in support of SSL continued operations onboard USS PONCE. - Inform development of high-energy laser for system-of-record deployment on surface combatants.

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
<p>- Deliverables: Solid State Laser TACMEMO that provides crucial guidance for the crew of PONCE (and future platforms) to safely and effectively employ this new weapon system, the Analysis Report, and LaWS Final Report.</p> <p>- Accomplishments: Without the FLEX program, LaWS, the Navy's most revolutionary weapon of the 21st century, would not have been employed on a surface combatant nor would it be installed and in use today on USS PONCE.</p> <p>- First "shoot down" of representative UAV in an operational environment</p> <p>- First destruction of ordnance in an operational environment</p> <p>- Effective interface between CIWS and LaWS</p> <p>- LaWs embarked and engaged air targets:</p> <p>- Destroyed all three threat representative UAVs</p> <p>- Demonstrated High Energy Laze (HEL) reversible jamming of an Intelligence Surveillance and Reconnaissance (ISR) sensor on a UAV</p> <p>- Conducted scoring runs with HEL radiation on a UAV airborne target</p> <p>- Campaign: Aegis Ashore</p> <p>- Focus: The Navy's first Aegis ashore site is scheduled to meet full operational capability in FY 2015. The establishment and follow-on operation of Aegis Ashore presents unique challenges to include: for the entirety of Aegis Ashore.</p> <p>- The Aegis ashore CONEMP and MER institutes two commanding officers.</p> <p>- Navy BMD Enterprise is the forum for coordination but not execution.</p> <p>- No single Navy representative can independently assure performance of the Combat System without support functions outside their authority.</p> <p>- In light of these challenges, CNO designated USFFC Executive Agent for European Phased Adaptive Approach (EPAA) phase II, responsible for Aegis Ashore wholeness. To support this effort, USFFC directed a Wargame be conducted involving cognizant navy stakeholders to validate operational, training, and logistics planning in order to ensure the achievement of initial operational capability with proper mission wholeness.</p> <p>- Functions: Wargame Objectives:</p>

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
<ul style="list-style-type: none"> - Identify gaps in procedures, resources, manpower, and interoperability of civilian, contractor, and military personnel base-wide at varying readiness states. - Identify gaps in training and qualification for AAMDS and AAMDF personnel. - Identify gaps in the logistical support, functional roles, responsibilities, and processes. - Deliverables: <ul style="list-style-type: none"> - Quicklook and final report documented risks, gaps, and mitigation options for the forward basing, sustainment, and operational employment of Aegis Ashore. - Wargame Analysis Report identifying wholeness gaps in order to influence contract and budgetary requirements including: <ul style="list-style-type: none"> - A list of identified operational, employment, training, logistics, and sustainment challenges, and gaps and seams for Aegis Ashore. - A list of actionable stakeholder items, based on findings, that will lead to revising CONOPS and governing documents. - Recommended revisions to the following: host nation agreements, host tenant agreements, emergency action plan, Force Protection plan, development of other security procedures, development of damage control and other emergency procedures, logistics concept of operations, training plan for facility personnel, maintenance procedure development, and medical concept of operations. - Accomplishments: In addition to producing the quicklook report, final experiment report, and analysis report, the effort evaluated the adequacy of the Aegis Ashore Platform Wholeness Fleet Concept of Operations (CONOPS). Installation of the first Aegis Ashore system in Romania in 2015 represents phase 2 of the U.S's EPAA designed to provide ballistic missile defense to portions of the European continent. The FLEX program provided direct support to a key national strategic imperative. - Campaign: Joint High Speed Vehicle (JHSV) <ul style="list-style-type: none"> - Focus: Conducted at the direction of CUSFF and in direct support of the OPNAV-led LCS/JHSV Council, the 2014 JHSV campaign evaluated new missions capable of being supported by the JHSV, with an initial focus on mission options involving little or no modification to the existing sea frame. Completed in two phases during USNS SPEARHEAD's (JHSV-1) maiden deployment to COMSIXTHFLT (C6F) and COMFOURTHFLT (C4F) AORs from Jan-Oct 2014, the effort explored the effectiveness of using various Adaptive Force Packages (AFPs) to expand JHSV platform employment options.

	FY 2014	FY 2015	FY 2016 Base	FY 2016 OCO	FY 2016 Total
<p>- Participants include Space and Naval Warfare Systems Command (SPAWAR), ships and aircraft from the Navy and Air Force, program executive offices (PEO), coalition and allied partners, and multiple Navy commands.</p> <p>- Strict experimental design and controlled data collection efforts, including both quantitative and qualitative metrics, make VS14 a robust venue for the evaluation of technologies in an operational setting. The complexity of this experiment requires a skilled, highly experienced staff for planning, experiment design, data analysis, and reporting. Pacific Science & Engineering Group (PSE), having resident experience in the past 11 Trident Warrior experiments and in VS13, is considered uniquely and distinctly qualified to perform these tasks.</p> <p>- Functions: PSE provided human-system integration (HSI) analytical, experimental, and human factors engineering services to support NWDC during experimental design, execution, analysis, and reporting of VS14. PSE completed the following tasks in support of VS14:</p> <ul style="list-style-type: none"> - Developed Experimental Design and Test Plan - Advised Focus Area Leads and other subject matter experts (SME) on matters related to qualitative data collection. - Reviewed Experiment Plans contained in the FLEX Information Management System (FIMS) database and input plans for qualitative components. - Execution and Data Collection. - Developed items for data collection instruments to measure attributes of interest to answer VS14 critical questions. - Developed data collection instruments (surveys, observation logs, and interviews). - Provided data collection instruments in on-line, paper and pencil, and other formats as required. - Assisted in the development of Data Collector training and materials. - Analyzed Results and Outcomes. - Collaborated with active duty and Naval Reserve personnel and NWDC staff to ensure all data was accounted for. - Analyzed data and developed data summaries by attributes. Entered summary results into the appropriate results databases. - Reporting Findings - Represented assigned data types at assessment workshops and assisted with formulation of answers to critical questions. <p>- Deliverables:</p> <ul style="list-style-type: none"> - Data collection instruments

<p>- Data summaries at critical questions level in a form suitable for input into FIMS database</p> <p>- Accomplishments:</p> <ul style="list-style-type: none"> - VS14 included 21 experiments and demonstrations, with 19 successfully completed, 1 partially accomplished, and 1 not executed with the following objectives completed: - Improve tactical readiness of selected forward deployed forces while mitigating exposure of tactics, techniques and procedures (TTPs) to adversary collection efforts. - Improve and advance joint interoperability of selected theater forces - Support and assess USPACOM theater-wide strategic communication - Assess Anti-Submarine Warfare in a multi-threat environment. - Assess distributed basing (Expeditionary Airfield Operations) to include ashore logistics and sustainment operations. - Validation of Unmanned Aircraft Systems (UAS) third party targeting TACMEMO completed. - Validation of Employment of Surface Warfare (SUW) Tactical Tomahawk TACBUL completed. - Additionally, sufficient data was collected to be analyzed over the coming months to determine the effects of electronic attacks. <p>- Campaign: Naval Obscurants</p> <ul style="list-style-type: none"> - Focus: Conduct a three-phased naval obscurants experiment. - Phase I, a modeling and simulation (M&S) event, was paramount to the safe completion of the phase III at-sea experiment. Serving as risk mitigation for Phase III, Phase I answered critical questions for shaping the experiment design and removed challenges for completing the Naval obscurants campaign in the C7F AOR. - The M&S and the Phase II shore-based events provided risk mitigation, fostered experiment design, and increased the knowledge base. Additionally, M&S and shore-based phases benefitted NWDC and the Navy beyond the Naval obscurants campaign by providing a capability that will be useful for training, and developing larger form tactics, techniques, and procedures. <p>- Functions: Assessed the potential of Naval Obscurants to reduce the vulnerability of U.S. platforms to detection and explored the potential detrimental effects on own-ship systems including radar, communications, human health, and machinery.</p> <ul style="list-style-type: none"> - Study relied heavily upon existing information, including Naval Obscurant test data, ship system radio frequency (RF) performance information, published health studies, and other literature (open and classified).

<p>Evaluate the JHSV as a Counter-tracking AFSB and its ability to support Unmanned Mine Counter Measures (UMCM) operations Inform changes to JHSV Fleet Warfighting CONOPS and inform acquisition investment decisions Stakeholders - C4F - NWDC - USFF Deliverables - Quicklook and final experiment report with findings and DOTMLPF-P recommendations - Training and Readiness input - Revised CONOPS/TTPs Accomplishments TBD</p> <p>FY 2016 Base Plans: 1. Campaign Naval Integrated Fire Control-Counter Air (NIFC-CA) Wargame 2 Focus Will executed NIFC-CA Wargame 3 in Dec 2015. Navy leadership requires awareness and understanding of the NIFC-CA capability in order to protect its "game changing" capabilities and key programs. A comprehensive methodology is required to synchronize delivery of all NIFC-CA doctrine, organization, training, materiel, leadership, personnel, facilities, and policy (DOTMLPF-P) actions, and Navy leadership requires insight into challenges and limitations associated with NIFC-CA in operational scenarios. Throughout FY15, conduct a series of events including modeling and simulation (M&S) development leading up to NIFC-CA system wargame 3 planned for Dec 2016. Examine how NIFC-CA increment 1 capabilities, circa 2017, contribute to air warfare in an operationally representative environment. There are repeats in the work as campaigns such as NIFC-CA are multi-year events based on additions of capability also known as increments. The highly complex threat and introduction of capability take years to experiment with in order to deliver TTP/ TACMEMOs/Doctrine/Material capability for the Fleet to train to and use.</p> <p>While the number of campaigns may decrease, the complexity will increase. For instance, EMW is ramping up in complexity and scope as the operators get smarter on what they need to experiment on in order to deliver capability. Same can be said for NIFC-CA as the increment comes on line.</p>

C. Other Program Funding Summary (\$ in Millions)

N/A

Remarks

D. Acquisition Strategy

This funding is used for 20 to 30 significant experiment campaigns/events encompassing up to 103 individual experiment initiative annually. These campaigns/events focused on addressing fleet identified capability gaps. The majority of this funding is used to acquire intellectual capital in emerging technical areas through contracts

providing engineering expertise, experiment design, execution and analysis support, and also used to purchase some engineering and integration costs associated with certain experiments.

E. Performance Metrics

Fleet Experimentation:

- Refine concepts and identify key performance levels necessary for implementation.
- Demonstrate feasibility and discriminate among competing concepts and implementation alternatives.
- Understand potential military effectiveness and risk.
- Evaluate how much of the new capability and attendant force structure is needed.
- Learn how to operate the new force and combine it with the legacy force.
- Develop recommended Doctrine, Organization, Training, Materiel, Leadership, and Personnel (DOTMLP) changes.
- Develop fleet war fighting requirements for submission to the OPNAV Navy Capabilities Development Process (NCDP) to inform Navy acquisition decisions.
- Integrate emergent concepts and technologies, leading to rapid introduction of needed war fighting capabilities in the fleet.
- Rapidly mature concepts, technologies, and doctrine.
